## Cybersecurity Position

Basler Electric is committed to the security of our products and we have implemented many processes and services that allow our Customers to be in compliance with regulatory requirements.

This commitment includes our continuous monitoring of industry standards for communications security and how they apply to our products. Industry standards include those as defined by North America Electric Reliability Corporation (NERC) Critical Infrastructure Protection (CIP). Basler Electric is committed to our Customers and facilitating their compliance with these industry standards. We continue aggressive cybersecurity developments including efforts for strong passwords, notification of product changes that impact security, and the support of periodic password changes. Basler Electric cybersecurity improvement efforts extend beyond the product level. We provide online services that inform our Customers monthly of any firmware or software updates. Once an online account is created, the user can elect to have monthly notifications of changes to firmware/software that may impact security. We also provide a history of changes to our products that may impact security.

Basler Electric has an ongoing process for continuous product improvement in support of cybersecurity. We are committed to providing our Customers with the highest quality products and services on the market today. Please contact us directly (+618-654-2341 / [info@basler.com](mailto:info@basler.com)) if you should have questions regarding the cybersecurity of Basler Electric products.

Sincerely,

A handwritten signature in black ink that reads "Tom Harnetiaux".

Tom Harnetiaux  
Vice President of Sales and Marketing
